

LP- DOCUFINE LC

Black & White-Filmdeveloper

Product description:

Unsurpassed sharpness - almost grainless - these results can be achieved with KODAK TP2415™ and MACOPHOT ORT25. These features are accessible for pictorial photography by using our docufine LC (low contrast). Uniform results without cloudiness.

Special feature:

Contrast can be adjusted via developing time ! This allows adaption to image contrast. In situations consisting of high contrast, LP-DOCUFINE LC will be the choice for other films as well, e.g. the new MACO IR 820c. In this case, individual tests for determining correct developing time are to be carried out.

Application:

The liquid concentrate will be diluted before use with a ratio of 1 + 4 with water.

Example:	For 250 cc working solution, you need 50 cc concentrate and 200 cc water. Without delay, 2 films can be developed. If need be, extend dev. time by 1 minute for the second film
Temperature:	20°C +/- 0,5 °C
Agitation:	The first 30 sec. agitate continuously, then agitate 1x every 30 sec.
Yield:	10 Films 135-36 or 120 per 250cc concentrate.
Storage:	Store cool and dark.
Storage life:	Original bottle unopened up to 1 year, after partial takeout up to 3 months.
Note:	For best results keep temperature and agitation precisely to instructions.

Safety advice: **Contains hydroquinone and sodium sulphite. Toxic if swallowed and irritant at eye- and skin contact. If swallowed induce vomiting and/or flush with plenty of water.**
Seek medical assistance. Keep out of reach of children.
